

Evidence Disc System™ Software

Version 1.8 Release Notes

Introduction

The Rimage Evidence Disc System (EDS) running the Evidence Disc System Software (EDSS) reads files from optical evidence discs and USB media devices using the Rimage Media Reader, analyzes the file data, and reports on the content it finds. As each disc is processed the attached camera photographs the disc label to make sure the evidence chain is not compromised.

Requirements

Evidence Disc System Software version 1.8 requires:

- Rimage Producer 8200NF or Professional 5410NF system running Rimage Software Suite version 8.6 or 8.7.
- Rimage Producer 8100NF or Professional 5400NF system running Producer Software Suite version 8.6 or 8.7.

Installation

Install the **Rimage Evidence Disc System Software (EDSS)**.

Note: You must have administrator rights to install this software on the Rimage control center.

1. Close the **Rimage EDS application**.
2. Pause **Production Server**.
3. Insert the **Rimage EDSS disc** into the Rimage Producer or Professional autoloader.
4. Browse and select **Setup.exe**. The installation wizard starts.
5. Follow the **wizard prompts**.
6. If you are upgrading from a previous version your Settings will be reset to the program defaults. Please use the Tools/Settings dialog to make any changes you would like for your system before running cases.

The Rimage Evidence Disc System is ready for use.

Support and Functionality Provided

Changes to EDSS since version 1.8

- Added support for reading USB devices (e.g., SD, thumb drives, etc.) using a Rimage Media Reader.
- Added support for reopening cases that have been done previously.
- Added Japanese translated version.
- Added support for Windows 8 and 8.1.
- Bug fixes.
