Maestro

Replace USB Recorder

Use this procedure to replace a USB Recorder unit in a Maestro system.

Required Tools

• Torx 10 screw driver

Before You Begin

- Power off the Maestro
- Remove Data Module and Case Magazines
- Remove the top cover

Remove a USB Recorder Unit

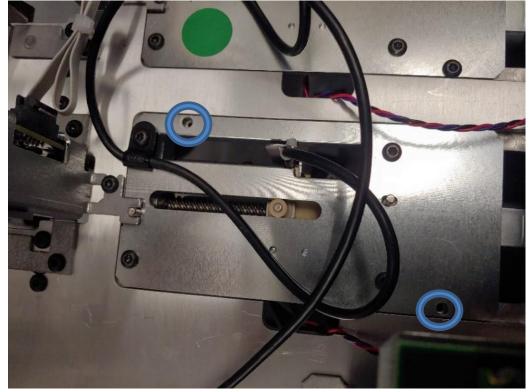

- 1. Disconnect the USB cable from the USB Power Controller.
 - The cables are mapped top to bottom on the controller, to A D on the recorders.
 - The recorder cables are the black cables, do not remove the blue cables.

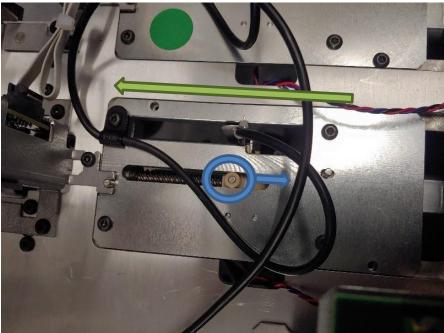

2. Remove the USB cable from the clip, and pull it through the zip tie that routes all of the USB recorder cables.

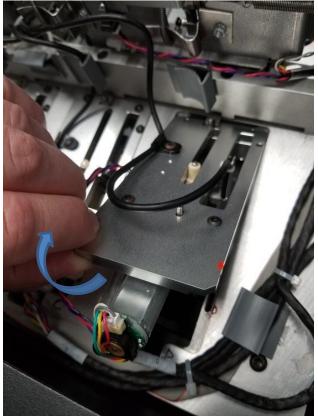

3. Remove the two T10 screws that secure the recorder in place.

- 4. Push the recorder **forward**.
 - Make sure the **bushing** is in the back position. If it is not, the lifting fork my obstruct removal.

- 5. Lift the back end of the recorder, then slide it out.
 - Take care not to bump the **motor** and **sensor** mounted to the back of the recorder unit.

6. Disconnect the **power cable**.

7. Disconnect the **sensor cable**.

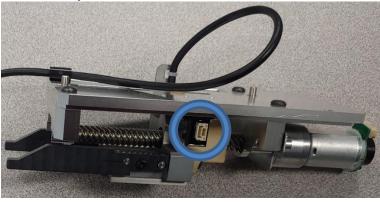

Install a USB Recorder Unit

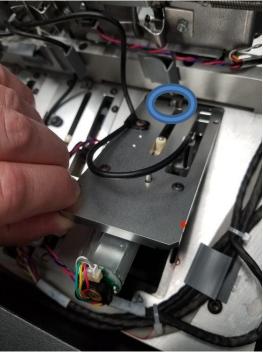

1. Connect the sensor cable.

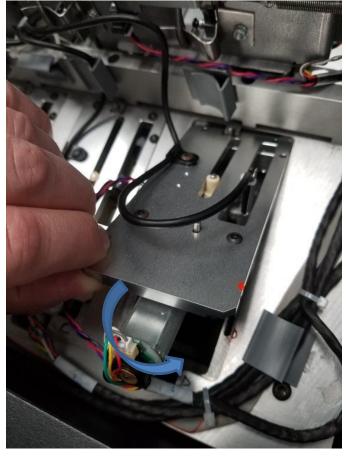

2. Connect the **power cable**.

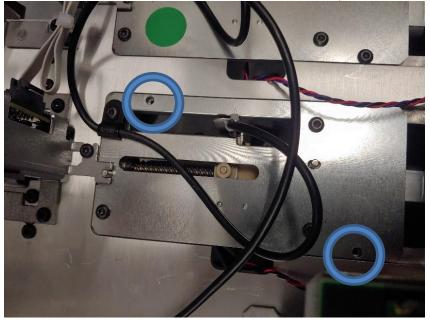

3. Insert the front end of the recording unit, lining up the **post** with the **bracket**.

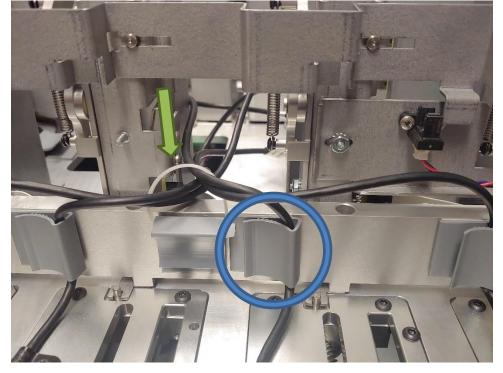

- 4. Gently drop the backend of the recording unit into place.
 - Take care not to bump the **motor** and **sensor** mounted to the back of the recorder unit

5. Install the **two Torx 10 screws** to secure the recorder in place.

6. Secure the USB cable in the clip, and route it through the zip tie to the USB Power Controller.

7. Connect the **USB cable** to the USB Power Controller.
